

Team meeting

Members in attendance: all except kailash (couldn't make it but informed us on this)

In this team meeting our main focus was the upcoming meeting with nikita and what we would have to get done.

- We discussed that the project board should be updated with tasks and that each member that doesn't have a task should assign themselves to one and work on that during the following week.
- We discussed how we would need a running project to demonstrate during the meeting in order to show everything that we have done.
- We talked about what we had to get done during the previous week, with that being the home page, understanding the database, and starting the other pages.
- We also caught up the other team mates about the changes made to the project, these changes were made during the recitation with nikita on friday.
- Then finally we discussed what tasks were already assigned and what tasks took priority in being assigned to someone.
