

Version 1.00

- New Project idea: global chat a way to live chat with others that have translations to one's preferred language done instantly
- Wireframes added: a way to give the team an understanding of how the project will look when finishing
- Repository added: repository for group to submit their code for the project was added
- Folders in repository added: Allprojectcode, team milestones, meeting logs folders added
- Basic pages added: added login, home, register page
- Added small database

Version 2.00

- Changes to pages:
 - Login page is now finished and created
 - Register page now finished and created
 - Home page now working
- Added back end code:
 - Code for register added
 - Code for login added
 - Code for home added
 - All of this code helps the functionality of the front end and connects front end to back end
 - All code for this done in index.js
 - Added test cases (for lab 11) but good functionality

Version 3.00

- Changes to project idea
 - Project now is global news that will allow one to translate any post that is on the page
- Changes to pages
 - Home page now works as the status page, having css style to it as well as having a welcome message
 - Register page now has five sections to fill out and require one to fill out each section
- Added pages
 - Added settings page to allow users to change certain things (still in progress)
 - Added global news page for all news to be their
- Added modal
 - Modal was added to allow users to submit their own post
- Database changes
 - Made changes to user table
 - Inserted new table for post
 - Inserted new table to connect users and friends
- Changes to index.js
 - Multiple gets and post for different pages were added to help with functionality

- Added possible logo

Version 4.00

- Added styling:
 - All pages now include some form of css, having a nice green color in the background
- Logo added to be global chat on the nav bar
- News page:
 - Post are now ordered from top to bottom based on the order of how they were posted, newer posts are at the top.
 - Posts are now in a table giving the overall look of the page a much needed upgrade to look better.
 - Table includes a header and body, post go in body of table
 - Now have a title above the table "Here are a list of current news stories:"
- Home page:
 - Made changes to the welcoming text to users
 - Centered the text on the page
 - Now have cards that introduce and show the 5 newest/recent post made
 - Each card have a 'view translation' button that when clicked, will instantly translate the message and render in the news page
 - If you don't want to use the translation button, added 'see all stories' button so that the user doesn't have to scan the entire page in order to find a way to navigate to all posts
- New page: 'profile page'
 - A page that will display all the posts the logged in user has made in a table, this table will only display the users post.
- Changes to navbar:
 - Nav bar now includes 'News' that way the user has another way to navigate to the news page to see all post
- Register page:
 - Register page now has the input split into a 2x2 table to give the page a bit more white space and style
